of Ulystenia.

From the history of the Symploms of this discusse, I refer you to De denham and De bullen who knee described than wot only con consentyation of all disease. It is an epitome, or I thall briefly enumerate some of its most Striking pullimities and symptoms. I It is seated primarily in the trewes, errus. =cles, alimentary Canal, but rarely affects the blood repels. In this respect only it differs from the gout which affects the blood bypelo with all those parts of the body which are affulted by Thysteria, or seeshaps it is enosepro-- per to say it is gout in the formof Errushin or tiffany instead of broad Cloutte, for it is brought on by the operation of most of the

V the depation of the menses, but I have Once fined Seen it in two histers, the one but toos, and the other but sixyears Old. It runarkable its affects were an apparently robust constitution does not protect women from it. F3 The Physteria appears in a Chronic form without internipions 4 It appears in parveyons with a perfect freedom from all its Sympetons in its intervals. The pawseysons are more swere in this Case than when they are followed by the Ahronis form of the Discase.
